

Key Terms

- ceteris paribus** other things being equal
- complements** goods that are often used together so that consumption of one good tends to enhance consumption of the other
- consumer surplus** the extra benefit consumers receive from buying a good or service, measured by what the individuals would have been willing to pay minus the amount that they actually paid
- deadweight loss** the loss in social surplus that occurs when a market produces an inefficient quantity
- demand** the relationship between price and the quantity demanded of a certain good or service
- demand curve** a graphic representation of the relationship between price and quantity demanded of a certain good or service, with quantity on the horizontal axis and the price on the vertical axis
- demand schedule** a table that shows a range of prices for a certain good or service and the quantity demanded at each price
- economic surplus** see social surplus
- equilibrium** the situation where quantity demanded is equal to the quantity supplied; the combination of price and quantity where there is no economic pressure from surpluses or shortages that would cause price or quantity to change
- equilibrium price** the price where quantity demanded is equal to quantity supplied
- equilibrium quantity** the quantity at which quantity demanded and quantity supplied are equal for a certain price level
- excess demand** at the existing price, the quantity demanded exceeds the quantity supplied; also called a shortage
- excess supply** at the existing price, quantity supplied exceeds the quantity demanded; also called a surplus
- factors of production** the resources such as labor, materials, and machinery that are used to produce goods and services; also called inputs
- inferior good** a good in which the quantity demanded falls as income rises, and in which quantity demanded rises and income falls
- inputs** the resources such as labor, materials, and machinery that are used to produce goods and services; also called factors of production
- law of demand** the common relationship that a higher price leads to a lower quantity demanded of a certain good or service and a lower price leads to a higher quantity demanded, while all other variables are held constant
- law of supply** the common relationship that a higher price leads to a greater quantity supplied and a lower price leads to a lower quantity supplied, while all other variables are held constant
- normal good** a good in which the quantity demanded rises as income rises, and in which quantity demanded falls as income falls
- price** what a buyer pays for a unit of the specific good or service
- price ceiling** a legal maximum price
- price control** government laws to regulate prices instead of letting market forces determine prices
- price floor** a legal minimum price
- producer surplus** the extra benefit producers receive from selling a good or service, measured by the price the producer actually received minus the price the producer would have been willing to accept
- quantity demanded** the total number of units of a good or service consumers are willing to purchase at a given price
- quantity supplied** the total number of units of a good or service producers are willing to sell at a given price
- shift in demand** when a change in some economic factor (other than price) causes a different quantity to be demanded at every price
- shift in supply** when a change in some economic factor (other than price) causes a different quantity to be supplied at every price
- shortage** at the existing price, the quantity demanded exceeds the quantity supplied; also called excess

demand

social surplus the sum of consumer surplus and producer surplus

substitute a good that can replace another to some extent, so that greater consumption of one good can mean less of the other

supply the relationship between price and the quantity supplied of a certain good or service

supply curve a line that shows the relationship between price and quantity supplied on a graph, with quantity supplied on the horizontal axis and price on the vertical axis

supply schedule a table that shows a range of prices for a good or service and the quantity supplied at each price

surplus at the existing price, quantity supplied exceeds the quantity demanded; also called excess supply

total surplus see social surplus

Key Concepts and Summary

3.1 Demand, Supply, and Equilibrium in Markets for Goods and Services

A demand schedule is a table that shows the quantity demanded at different prices in the market. A demand curve shows the relationship between quantity demanded and price in a given market on a graph. The law of demand states that a higher price typically leads to a lower quantity demanded.

A supply schedule is a table that shows the quantity supplied at different prices in the market. A supply curve shows the relationship between quantity supplied and price on a graph. The law of supply says that a higher price typically leads to a higher quantity supplied.

The equilibrium price and equilibrium quantity occur where the supply and demand curves cross. The equilibrium occurs where the quantity demanded is equal to the quantity supplied. If the price is below the equilibrium level, then the quantity demanded will exceed the quantity supplied. Excess demand or a shortage will exist. If the price is above the equilibrium level, then the quantity supplied will exceed the quantity demanded. Excess supply or a surplus will exist. In either case, economic pressures will push the price toward the equilibrium level.

3.2 Shifts in Demand and Supply for Goods and Services

Economists often use the *ceteris paribus* or “other things being equal” assumption: while examining the economic impact of one event, all other factors remain unchanged for analysis purposes. Factors that can shift the demand curve for goods and services, causing a different quantity to be demanded at any given price, include changes in tastes, population, income, prices of substitute or complement goods, and expectations about future conditions and prices. Factors that can shift the supply curve for goods and services, causing a different quantity to be supplied at any given price, include input prices, natural conditions, changes in technology, and government taxes, regulations, or subsidies.

3.3 Changes in Equilibrium Price and Quantity: The Four-Step Process

When using the supply and demand framework to think about how an event will affect the equilibrium price and quantity, proceed through four steps: (1) sketch a supply and demand diagram to think about what the market looked like before the event; (2) decide whether the event will affect supply or demand; (3) decide whether the effect on supply or demand is negative or positive, and draw the appropriate shifted supply or demand curve; (4) compare the new equilibrium price and quantity to the original ones.

3.4 Price Ceilings and Price Floors

Price ceilings prevent a price from rising above a certain level. When a price ceiling is set below the equilibrium price, quantity demanded will exceed quantity supplied, and excess demand or shortages will result. Price floors prevent a price from falling below a certain level. When a price floor is set above the equilibrium price, quantity supplied will exceed quantity demanded, and excess supply or surpluses will result. Price floors and price ceilings often lead to unintended consequences.

3.5 Demand, Supply, and Efficiency

Consumer surplus is the gap between the price that consumers are willing to pay, based on their preferences, and the market equilibrium price. Producer surplus is the gap between the price for which producers are willing to sell a product, based on their costs, and the market equilibrium price. Social surplus is the sum of consumer surplus and producer surplus. Total surplus is larger at the equilibrium quantity and price than it will be at any other quantity and price. Deadweight loss is loss in total surplus that occurs when the economy produces at an inefficient quantity.

Self-Check Questions

1. Review [Figure 3.4](#). Suppose the price of gasoline is \$1.60 per gallon. Is the quantity demanded higher or lower than at the equilibrium price of \$1.40 per gallon? What about the quantity supplied? Is there a shortage or a surplus in the market? If so, how much?
2. Why do economists use the *ceteris paribus* assumption?
3. In an analysis of the market for paint, an economist discovers the facts listed below. State whether each of these changes will affect supply or demand, and in what direction.
 - a. There have recently been some important cost-saving inventions in the technology for making paint.
 - b. Paint is lasting longer, so that property owners need not repaint as often.
 - c. Because of severe hailstorms, many people need to repaint now.
 - d. The hailstorms damaged several factories that make paint, forcing them to close down for several months.
4. Many changes are affecting the market for oil. Predict how each of the following events will affect the equilibrium price and quantity in the market for oil. In each case, state how the event will affect the supply and demand diagram. Create a sketch of the diagram if necessary.
 - a. Cars are becoming more fuel efficient, and therefore get more miles to the gallon.
 - b. The winter is exceptionally cold.
 - c. A major discovery of new oil is made off the coast of Norway.
 - d. The economies of some major oil-using nations, like Japan, slow down.
 - e. A war in the Middle East disrupts oil-pumping schedules.
 - f. Landlords install additional insulation in buildings.
 - g. The price of solar energy falls dramatically.
 - h. Chemical companies invent a new, popular kind of plastic made from oil.
5. Let's think about the market for air travel. From August 2014 to January 2015, the price of jet fuel increased roughly 47%. Using the four-step analysis, how do you think this fuel price increase affected the equilibrium price and quantity of air travel?
6. A tariff is a tax on imported goods. Suppose the U.S. government cuts the tariff on imported flat screen televisions. Using the four-step analysis, how do you think the tariff reduction will affect the equilibrium price and quantity of flat screen TVs?
7. What is the effect of a price ceiling on the quantity demanded of the product? What is the effect of a price ceiling on the quantity supplied? Why exactly does a price ceiling cause a shortage?
8. Does a price ceiling change the equilibrium price?
9. What would be the impact of imposing a price floor below the equilibrium price?
10. Does a price ceiling increase or decrease the number of transactions in a market? Why? What about a price floor?
11. If a price floor benefits producers, why does a price floor reduce social surplus?

Review Questions

12. What determines the level of prices in a market?
13. What does a downward-sloping demand curve mean about how buyers in a market will react to a higher price?
14. Will demand curves have the same exact shape in all markets? If not, how will they differ?
15. Will supply curves have the same shape in all markets? If not, how will they differ?
16. What is the relationship between quantity demanded and quantity supplied at equilibrium? What is the relationship when there is a shortage? What is the relationship when there is a surplus?
17. How can you locate the equilibrium point on a demand and supply graph?
18. If the price is above the equilibrium level, would you predict a surplus or a shortage? If the price is below the equilibrium level, would you predict a surplus or a shortage? Why?
19. When the price is above the equilibrium, explain how market forces move the market price to equilibrium. Do the same when the price is below the equilibrium.
20. What is the difference between the demand and the quantity demanded of a product, say milk? Explain in words and show the difference on a graph with a demand curve for milk.
21. What is the difference between the supply and the quantity supplied of a product, say milk? Explain in words and show the difference on a graph with a supply curve for milk.
22. When analyzing a market, how do economists deal with the problem that many factors that affect the market are changing at the same time?
23. Name some factors that can cause a shift in the demand curve in markets for goods and services.
24. Name some factors that can cause a shift in the supply curve in markets for goods and services.
25. How does one analyze a market where both demand and supply shift?
26. What causes a movement along the demand curve? What causes a movement along the supply curve?
27. Does a price ceiling attempt to make a price higher or lower?
28. How does a price ceiling set below the equilibrium level affect quantity demanded and quantity supplied?
29. Does a price floor attempt to make a price higher or lower?
30. How does a price floor set above the equilibrium level affect quantity demanded and quantity supplied?
31. What is consumer surplus? How is it illustrated on a demand and supply diagram?
32. What is producer surplus? How is it illustrated on a demand and supply diagram?
33. What is total surplus? How is it illustrated on a demand and supply diagram?
34. What is the relationship between total surplus and economic efficiency?
35. What is deadweight loss?

Critical Thinking Questions

36. Review [Figure 3.4](#). Suppose the government decided that, since gasoline is a necessity, its price should be legally capped at \$1.30 per gallon. What do you anticipate would be the outcome in the gasoline market?
37. Explain why the following statement is false: “In the goods market, no buyer would be willing to pay more than the equilibrium price.”

38. Explain why the following statement is false: “In the goods market, no seller would be willing to sell for less than the equilibrium price.”
39. Consider the demand for hamburgers. If the price of a substitute good (for example, hot dogs) increases and the price of a complement good (for example, hamburger buns) increases, can you tell for sure what will happen to the demand for hamburgers? Why or why not? Illustrate your answer with a graph.
40. How do you suppose the demographics of an aging population of “Baby Boomers” in the United States will affect the demand for milk? Justify your answer.
41. We know that a change in the price of a product causes a movement along the demand curve. Suppose consumers believe that prices will be rising in the future. How will that affect demand for the product in the present? Can you show this graphically?
42. Suppose there is a soda tax to curb obesity. What should a reduction in the soda tax do to the supply of sodas and to the equilibrium price and quantity? Can you show this graphically? *Hint:* Assume that the soda tax is collected from the sellers.
43. Use the four-step process to analyze the impact of the advent of the iPod (or other portable digital music players) on the equilibrium price and quantity of the Sony Walkman (or other portable audio cassette players).
44. Use the four-step process to analyze the impact of a reduction in tariffs on imports of iPods on the equilibrium price and quantity of Sony Walkman-type products.
45. Suppose both of these events took place at the same time. Combine your analyses of the impacts of the iPod and the tariff reduction to determine the likely impact on the equilibrium price and quantity of Sony Walkman-type products. Show your answer graphically.
46. Most government policy decisions have winners and losers. What are the effects of raising the minimum wage? It is more complex than simply producers lose and workers gain. Who are the winners and who are the losers, and what exactly do they win and lose? To what extent does the policy change achieve its goals?
47. Agricultural price supports result in governments holding large inventories of agricultural products. Why do you think the government cannot simply give the products away to people experiencing poverty?
48. Can you propose a policy that would induce the market to supply more rental housing units?
49. What term would an economist use to describe what happens when a shopper gets a “good deal” on a product?
50. Explain why voluntary transactions improve social welfare.
51. Why would a free market never operate at a quantity greater than the equilibrium quantity? *Hint:* What would be required for a transaction to occur at that quantity?

Problems

52. Review [Figure 3.4](#) again. Suppose the price of gasoline is \$1.00. Will the quantity demanded be lower or higher than at the equilibrium price of \$1.40 per gallon? Will the quantity supplied be lower or higher? Is there a shortage or a surplus in the market? If so, of how much?

53. [Table 3.8](#) shows information on the demand and supply for bicycles, where the quantities of bicycles are measured in thousands.

Price	Qd	Qs
\$120	50	36
\$150	40	40
\$180	32	48
\$210	28	56
\$240	24	70

TABLE 3.8

- a. What is the quantity demanded and the quantity supplied at a price of \$210?
 - b. At what price is the quantity supplied equal to 48,000?
 - c. Graph the demand and supply curve for bicycles. How can you determine the equilibrium price and quantity from the graph? How can you determine the equilibrium price and quantity from the table? What are the equilibrium price and equilibrium quantity?
 - d. If the price was \$120, what would the quantities demanded and supplied be? Would a shortage or surplus exist? If so, how large would the shortage or surplus be?
54. The computer market in recent years has seen many more computers sell at much lower prices. What shift in demand or supply is most likely to explain this outcome? Sketch a demand and supply diagram and explain your reasoning for each.
- a. A rise in demand
 - b. A fall in demand
 - c. A rise in supply
 - d. A fall in supply

55. [Table 3.9](#) illustrates the market's demand and supply for cheddar cheese. Graph the data and find the equilibrium. Next, create a table showing the change in quantity demanded or quantity supplied, and a graph of the new equilibrium, in each of the following situations:

- The price of milk, a key input for cheese production, rises, so that the supply decreases by 80 pounds at every price.
- A new study says that eating cheese is good for your health, so that demand increases by 20% at every price.

Price per Pound	Qd	Qs
\$3.00	750	540
\$3.20	700	600
\$3.40	650	650
\$3.60	620	700
\$3.80	600	720
\$4.00	590	730

TABLE 3.9

56. [Table 3.10](#) shows the supply and demand for movie tickets in a city. Graph demand and supply and identify the equilibrium. Then calculate in a table and graph the effect of the following two changes.

- Three new nightclubs open. They offer decent bands and have no cover charge, but make their money by selling food and drink. As a result, demand for movie tickets falls by six units at every price.
- The city eliminates a tax that it placed on all local entertainment businesses. The result is that the quantity supplied of movies at any given price increases by 10%.

Price per Ticket	Qd	Qs
\$5.00	26	16
\$6.00	24	18
\$7.00	22	20
\$8.00	21	21
\$9.00	20	22

TABLE 3.10

57. A low-income country decides to set a price ceiling on bread so it can make sure that bread is affordable to the poor. [Table 3.11](#) provides the conditions of demand and supply. What are the equilibrium price and equilibrium quantity before the price ceiling? What will the excess demand or the shortage (that is, quantity demanded minus quantity supplied) be if the price ceiling is set at \$2.40? At \$2.00? At \$3.60?

Price	Qd	Qs
\$1.60	9,000	5,000
\$2.00	8,500	5,500
\$2.40	8,000	6,400
\$2.80	7,500	7,500
\$3.20	7,000	9,000
\$3.60	6,500	11,000
\$4.00	6,000	15,000

TABLE 3.11
